

remOTE Occupational Therapy

Occupational Therapists use meaningful activities to help children and youth participate in what they need and/or want to do in order to promote physical and mental health well-being.

School-Based Occupational Therapists focus on academics, play and leisure, social participation, and self-care skills (ADLs or Activities of Daily Living) and transition / work skills. Occupational therapy's expertise includes activity and environmental analysis and modification with a goal of reducing the barriers of participation.

The OT practitioner collaborates with parents and school-staff to create solutions, taking into account the child, the activity, the setting. The goal is to promote participation through:

- Adapting activities & environments
- Collaborating with school personnel
- Offering instructional strategies (UDL or Universal Design)
- Increasing independence in daily living skills
- Supporting transition
- Recommending assistive technology
- Promoting positive behavior
- Supporting school mental health
- Increasing attention
- Addressing sensory, cognitive and motor needs

What are things we can do at home to promote Occupational Therapy skills?

Tips for Learning At Home

- **MAKE A SCHEDULE.** A schedule will give structure and routine for you and your child.
- **SET A TIMER.** Timers are useful to set up expectations and prepare your child for transitions between activities. You can use your phone as a timer.
- **ADD BREAKS.** Just like we need breaks when we work, your child will also need breaks. Breaks can include movement breaks, play breaks, etc.
- **BE ENCOURAGING.** Praise the effort, and not the result. If you find that you and your child are getting frustrated, try something different.

Home-Based Activities to Promote Skills

HAND- STRENGTHENING ACTIVITIES

CRUMPLE PAPERS. Have your child help you clean up excess paper. Before throwing it away, practice crumpling it up. You can even make this into a game.

SPRAY BOTTLES. Have your child help you water the plants or clean surfaces. Let them squeeze the bottle during these activities.

PLAY WITH FLOUR. Have your child help you bake and knead dough. If you're not cooking, make shapes with flour and dough. The thicker the consistency, the harder it is to work with the dough.

PLAY-DOH or THERAPUTTY. Make shapes and play games with this material. Pay attention to the difficulty of the texture of the material. They will label how firm or soft it is.
